In 2010, the United Nations declared water a human right. How is it then possible that growing privatization of water sources makes access to clean drinking water more difficult for more and more people and even prevents it?

Four highlights provide insight into which organizations and individuals simply buy the right to water before the eyes of the UN, the consequences for water quality, and solutions for the

dilemma. The numerous links make it easier to conduct your own research for a deeper understanding. When searching for specific individuals and organizations, you encounter many familiar names:

you can find the four short contributions here: - the unethical practices of the bottled water industry using the example of the former CEO of Nestle

- who is driving the privatization of water sources?

- whose responsibility would it be to defend the specifications of the United Nations?

- what impact does the privatization of water sources have on the quality of pipes and drinking water?

It's good.
to be truu.
