The problem is that plastic cannot be completely broken down. ...

The problem is that plastic cannot be completely broken down. Rather, it disintegrates into increasingly smaller particles, down to plastic particles that are no longer visible to our eyes. Plastic has recently been detected in all human organs and also in blood. The main source of contamination is beverages. The safest protection is offered by a private "firewall" for the domestic water line. More information ...

The problem is that plastic cannot be completely broken down. Rather, it disintegrates into increasingly smaller particles, down to plastic particles that are no longer visible to our eyes. Plastic has recently been detected in all human organs and also in blood. The main source of contamination is beverages. The safest protection is offered by a private "firewall" for the domestic water line. More information here

It's good.
to be truu.
