Why do scientists who demonstrate the phenomenon of physical change in water through human emotions face hostility?

Anyone who engages with water research encounters physical phenomena that are vehemently disputed and reinterpreted by a group of scientists. Observations and findings

about the properties of water are deliberately regulated by these "recognized" researchers and denied contrary to all reason.

In the following VII parts, we follow the money and shed light on reasons why established scientists do not want to see the forest for the trees and even deny findings of recognized colleagues with impressive academic careers in leading research positions.

It's good.
to be truu.
